Penny and Paul,

This one does in fact appear to affect a site eligible to the National Register of Historic Places. The Pariette Mine, 42DC983, is located in the NW 1/4 of Section 32. This is a large previously-recorded historical mining site that is considered significant. Drilling and mining in it might be an adverse effect (hard to say without more detailed info). If there is any way to work with the operator regarding either avoiding the site, or, if that isn't possible place mining locations and drill holes in a sensitive manner to avoid the significant mining features of the site that would be great. I can provide more info if needed.

I also noticed that part of that site and, as near as I can tell from the very simple NOI, part of the drilling/mining is on SITLA land. Does SITLA get notified on these? They might have an interest, AND, they might also be able to provide some input. I've cc'd Kenny Wintch, lead cultural resources person for SITLA in case he is interested.

Thanks to you both, let me know if we can help further.

Sincerely,

Matt Seddon
